

Bracci e soffioni

Per un duplice piacere della doccia, la gamma Dream di Bossini moltiplica le sue funzioni offrendo un soffione a 2-3-4 differenti getti: in aggiunta al tradizionale getto wide-rain è possibile selezionare il getto nebulizzato, il getto cascata, il getto pettine ed infine il getto Kneipp. Tutti i soffioni Dream sono dotati di un dispositivo di scarico acqua incorporato al centro del diffusore, che consente di ridurre al minimo il ristagno dell'acqua all'interno del soffione. Sistema brevettato Bossini. Non chiamatela più solamente doccia. Polisensorialità per esplorare le nuove frontiere del benessere: questa è la doccia emozionale che Bossini propone per la vostra day spa.

To double the pleasure of your shower, Dream now is available in different spray modes and offers 2-3-4 functions ceiling-mounted showerhead: in addition to the traditional wide-rain jet, you can now select a soft nebulized jet, a powerful cascade, a rain waterfall spray or a natural kneipp jet. A multisensorial experience to explore the new frontiers of well-being: this is the emotional shower that Bossini proposes for your day-spa.

All Bossini Dream ceiling-mounted showerheads have a built-in air suction duct in the water distribution chamber. This device, patented by Bossini, allows you to immediately discharge the residual water from the distribution chamber when you close the mixer, thereby minimizing water stagnation inside the showerhead.

MULTIFUNCTIONS

2-3-4 SPRAYS

Soffioni da controsoffitto - False ceiling showerheads - Kopfbrausen für Montage an der Zwischendecke - Douches pour installation à faux plafond - Ducha de falso techo

Sono sufficienti 16 Litri di acqua al minuto per far funzionare in modo ottimale i soffioni Dream. Il soffione, infatti, installato parallelamente al pavimento, eroga un getto a "caduta libera" come una morbida pioggia. Con l'installazione dei soffioni Dream è quindi consigliato utilizzare dei rubinetti che abbiano la capacità di erogare almeno 25 Litri di acqua al minuto. Naturalmente maggiore è la capacità del rubinetto, migliore sarà la funzionalità del soffione. È necessario assicurarsi, inoltre, che anche la caldaia dia l'apporto di acqua calda sufficiente per la corretta funzionalità. Tutti i soffioni Dream sono dotati di un dispositivo di scarico acqua incorporato al centro del diffusore, che consente di ridurre al minimo il ristagno dell'acqua all'interno del soffione. Sistema brevettato Bossini.

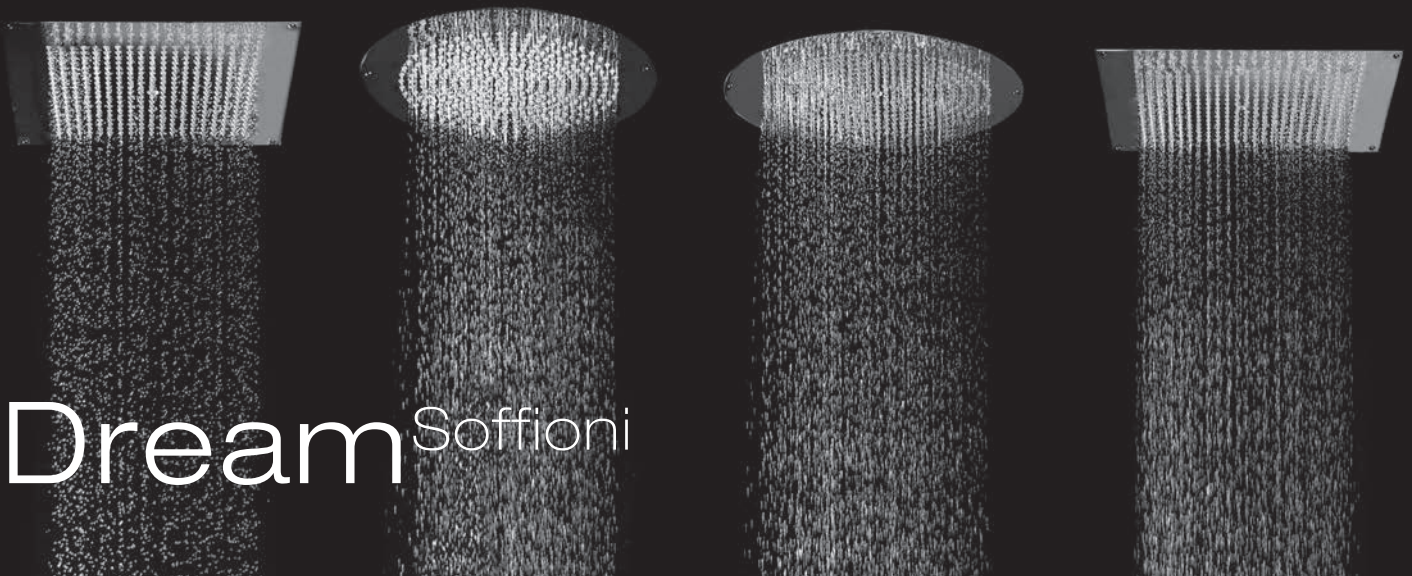

Only 16 Litres per minute of water are required for a good function of the Dream shower heads. It is not the water pressure to determinate the good performance, but the water capacity of the tap. The shower head in fact, when installed parallel to the floor, delivers a "free cascade spray", like a soft tropical rain. With the installation of the Dream Shower heads it is recommended to use a mixer which can delivers at least 25 Litres of water per minutes. Naturally, the higher the flow rate of the faucet, the better the showerhead will work. Also make sure that the hot water heater supplies enough hot water for proper functioning. All Dream shower heads are equipped with a water-drainage device incorporated at the spray head centre, which reduces water build-up to a minimum. Bossini patented system.

Damit die Dream-Kopfbrause funktioniert, reichen 16 Liter Wasser pro Minute. Aus der parallel zum Fußboden montierten Kopfbrause fällt das Wasser wie ein weicher Regenguss im „freien Fall“. Vergewissern Sie sich also vorher darüber, dass aus dem Wasserhahn mindestens 25 Liter Wasser pro Minute laufen. Umso stärker der Wasserfluss ist, desto besser funktioniert die Kopfbrause. Darüber hinaus muss gewährleistet sein, dass auch der Heizkessel in der Lage ist, ausreichend warmes Wasser zu liefern, damit die Kopfbrause ordnungsgemäß funktionieren kann. Alle Dream-Kopfbräusen sind mit einer Rücklaufvorrichtung ausgestattet, die in der Mitte des Diffusors eingebaut ist und dafür sorgt, dass sich im Inneren des Duschkopfs kein Wasser stauen kann. Patentiertes Bossini-System.

Il suffit de fournir 16 litres d'eau par minute pour faire fonctionner les plafonds de douche Dream. En effet, le plafond de douche étant installé parallèle au sol, il diffuse un jet en "chute libre" comme une pluie fine. Il faut donc vérifier que le robinet assure un débit d'au moins 25 litres d'eau par minute. Il va de soi que si le débit du robinet est plus important, le fonctionnement de la pomme n'en sera que meilleur. Contrôlez en outre que le chauffe-eau assure un apport en eau chaude suffisant pour le bon fonctionnement de la douche. Tous les plafonds de douche Dream sont équipés d'un dispositif d'évacuation d'eau incorporé au centre du diffuseur. Il permet de réduire au minimum la stagnation de l'eau à l'intérieur de la pomme de douche. Système breveté Bossini.

Para hacer funcionar las duchas Dream bastan solamente 16 litros de agua por minuto. En efecto, la ducha instalada paralela al suelo, eroga un corro de "caída libre" como una suave lluvia. Por consiguiente, asegurarse de que el grifo nos de por lo menos 25 litros de agua por minuto. Naturalmente cuanto mayor es la capacidad del grifo, mejor será la funcionalidad de la ducha. Además, es necesario verificar que la caldera también proporcione la aportación de agua caliente suficiente para el correcto funcionamiento. Todos los rociadores Dream vienen con un dispositivo de descarga de agua, incorporado en el centro del difusor, que permite reducir al mínimo el estancamiento de agua dentro del rociador. Sistema patentado Bossini.

Достаточно 16 литров воды в минуту для оптимального функционирования души Dream. Действительно, лейка установленная параллельно полу, позволяет воде вытекать в «свободном падении», напоминающем летний дождь. Устанавливая души линии Dream, рекомендуем использовать запорные краны с пропускной способностью не менее 25 литров воды в минуту. Естественно, чем больше пропускная способность крана, тем выше функциональность душевой лейки. Также, необходимо убедиться, что горячая вода, независимо от вида водоснабжения (водопровод, бойлер), подается в достаточном количестве для корректной работы лейки. Все душевые лейки Dream, оснащены специальным разгрузочным устройством, встроенным в центр распределительной поверхности, которое минимизирует застой воды внутри душа. Данная система запатентована компанией Bossini.
