

EPDM THREADED EXPANSION JOINT PN16

- Size :** DN 1/2" to 3"
- Ends :** Threaded BSP
- Min Temperature :** - 10°C
- Max Temperature :** + 100°C
- Max Pressure :** 16 Bars
- Specifications :** Absorb vibrations and noises
Linear and angular compansion
Double sphere
- Materials :** Cast iron fittings

EPDM THREADED EXPANSION JOINT PN16

SPECIFICATIONS :

- Absorb vibration, noises and expansion
- Linear and angular compansion
- Double sphere EPDM (EPDM marking)
- Cast iron fittings threaded BSP

Marking example :

USE :

- Water distribution
- Min Temperature : - 10°C
- Max Temperature Ts : + 100°C
- Max Pressure Ps : 16 bars (see graph)

PRESSURE / TEMPERATURE GRAPH (STEAM EXCLUDED) :

(Bar)

RANGE :

- EPDM expansion joint with cast iron fittings threaded BSP from DN 1/2" to DN 3" Ref. GKT8000

EPDM THREADED EXPANSION JOINT PN16

MATERIALS :

Item	Designation	Materials
1	Inner tube and cover	EPDM
2	Reinforcement	Nylon cord
3	Fittings	Galvanized cast iron

SIZE (in mm) :

Ref.	DN	1/2"	3/4"	1"	1"1/4	1"1/2	2"	2"1/2	3"

Angular	30°	30°	30°	30°	30°	20°	15°	15°

STANDARDS :

- Fabrication according to ISO 9001 : 2008
- DIRECTIVE 97/23/CE : Products excluded from directive (article 1, § 3.2)
- Threaded BSP conical fittings according to ISO 7/1 Rc

EPDM THREADED EXPANSION JOINT PN16

INSTALLATION INSTRUCTION :

Expansion joint are designed for the absorption of previously specified movements under specific pressure and temperature conditions. So that the maximum service life is achieved, the following items must be observed during installation.

- Prior to fitment of the compensator it must be ensured that :
 - The route of the pipeline is straight - The expansion tallies with that of the chosen compensator
 - The expansion tallies with that of The chosen compensator
 - The fixes points are dimensionned so that they can absorb the reaction forces and stiffness rate that arise during use.
 - The pipeline is limited by fixed points
 - The distance between compensator and bearing may be a maximum of 3 times the pipe diameter. Place only one compensator between 2 bearings.
- Each pipe elbow must be fixed by support, specially if compensator is mounted with limiters. Fixed bearings are necessary because compensator is submitted to expansion when it is under pressure.
- Expansion joint must not be painted and heat-insulated. It must be protected from bad weather and solar radiation.
- Please apply the following stages order :
 - a) Fixed points for above pipeline
 - b) Fixed points for down pipeline
 - c) Compensator mounting
- Installation layout :

1. Fixed points
2. With limiters
3. Bearings
4. Pipe guides

- Check that the compensator is not subjected to the weight of the pipeline. The installation lenght must agree with the installation gap. The compensator must never be twisted. It is recommended that specific characteristics be observed during maintenance :
 - The compensator must never be painted or recovered by heat insulation
 - The tightness of the bolts must be checked often.
 - The flanges must be perfectly cleared

NOTA : The life of compensator can vary because of working conditions (fluids, pressure, temperature), that is why it is necessary to check it regullary.

WRONG INSTALLATION :

Excessive compansion

Excessive expansion

Cutting too important

Torsion

Important compansion and angular deviation

Angular deviation too important
